

The Town of Bethel acting through its Public Utilities Commission is seeking proposals for Professional Consulting Engineering Services relative to its Public Water Supply.

The Commission is seeking to prioritize the findings of its most recent Water Supply Plan in light of events which have occurred since that plan was written.

Projects underway or in the various stages of design and completion include but are not limited to the following:

- 1) Construction of a water storage tank
- 2) Completion of Level A mapping and the filing of a Diversion Permit Application
- 3) Design and Construction of a Replacement South Street Pump Station

It is intended that the scope of work will include the prioritization of the remaining elements of the Water Supply Plan along with others that may be identified by the selected consultant.

A hydraulic model of the Distribution System has been prepared and it is anticipated that this model will be used in the analysis of the effects of the replacement of undersized water mains and flow improvements anticipated by any pipe rehabilitation projects.

It is not intended that this project be a rewrite or revision to the Water Supply Plan but a prioritization of its elements.

Additional information regarding proposal packages is available at the Office of Public Works Director/Town Engineer, 1 School Street, Bethel, CT 06810.

Proposals will be received by the Office of the Public Works Director/Town Engineer until September 6, 2013 at 2:00 p.m.

Written questions may be directed to Andrew Morosky, P.E., Town Engineer at 1 School Street, Bethel, CT 06810
